SG Optimizer

Get the best performance for your WordPress website with our optimization plugin. It handles caching, system settings, and all the necessary configurations for a blazing-fast website. With the SiteGround Optimizer enabled, you're getting the very best from your hosting environment!

Enable HTTPS

Configures your site to work correctly via HTTPS and forces a secure connection to your site.

Fix Insecure Content

Enable this option in case you're getting insecure content errors on your website. We will dynamically rewrite insecure requests for resources coming from your site

Switch to Recommended PHP Version

CHECK AGAIN

Our system will check for compatibility issues and inform you whether it is safe to upgrade to the recommended version:

Unfortunately some of your plugins or theme are not compatible with our recommended version

+ All-in-One WP Migration

+ DesktopServer for WordPress

Manual PHP Change.

Manually switch between different available PHP versions.

PHP 7.0 (Current)   SWITCH

GZIP Compression

Enables a compression of the content that's delivered to your visitors browsers improving the network loading times of your site.

Browser Caching

Adds rules to store in your visitors browser cache to keep static content longer for better site performance.
